

WORLD HAPPENINGS
BRIEFLY TOLD

The Polish army corps in the Soviet Union has been elevated to the status of a Polish army.

The king recently accepted the gift of a seven-foot St. Hubert by art in the Marly Palace.

Loss of the destroyer H.M.S. Mohit, R.M. commanded by Lt.-Comdr. E. A. R. M. Douglas, D.B.O., R.N., was announced by the Admiralty.

Group Capt. Frank Whittle, inventor of the jet-propelled airplane, has been elected a fellow of the Royal Aeronautical Society.

An appeal has been launched for \$100,000 for the restoration of the fabric of Bristol cathedral. The 500-year-old cathedral was damaged during the blitz.

Canada's national income in January was estimated tentatively by the Dominion Bureau of Statistics at \$277,000,000, compared with \$277,000,000 in January, 1943.

Prison farm eggs in Canada in 1943 totalled 53,027,000 dozen against 20,525,000 in 1942 and 221,000,000 in 1939, the Dominion Bureau of Statistics reports.

The Moscow home radio says that Tuganov, patrol aircraft under Field Marshal Boris Hovh, lost the German army 45,000 men during the campaign of December and January.

Approximately 30 varieties of soybeans have been grown in Canada in North America continent. It is estimated that there are more than 2,000 varieties of this bean, a native of China, in the world.

Canada Is Proud

Boys Of R.C.A.F. Have Brought Victory Home To Us

Hon. G. C. Power, Minister of National Defence, told the Canadian people the other day that the boys of the R.C.A.F. have paid heavy for Allied material of the air in this war. The war in the air has cost Canada 13,418 airmen in the far-flung campaigns of combat. Of this number 7,958 are dead or presumed dead, 3,384 are missing, prisoners-of-war, or interned.

Canada played a giant part in this war in the Great West. She is playing a still greater part in this war. With more than 300,000 in the Royal Canadian Air Force, Canada's air forces are fighting on practically every battle front, and Canadian ground crews are keeping them flying. Air force losses are greater than those of any other branch of the service. That, of course, is because so far Canada has not engaged in direct fighting on the ground. In the Great West Canada's total of killed in action exceeded 50,000, mostly army men, and western front in Europe, Canada still has a big battle to win on the ground. But in the air our airmen have been in the thick of it since early in the war. They have won many flying home for Canada. Our pride in them is known no end.—Lathbridge Herald.

ROMANS TRIED IT

The ancient Romans were now credited with having tried all the restrictions of ancient law, and reasoning, the freest of man power, and even what not. A college professor says that those measures were known as the "Theodetic Code".

Canadians in Italy Take To Skis

A ski trail in Italy. Vehicles tried unsuccessfully to get through to an isolated British party. Their trucks made excellent runs for these Canadian volunteers who brought and saved them considerable trouble. The party under Capt. G. W. Hume of Regina, Sask., brought in food and medical supplies to the snowbound unit.

Prison Camp

240,000 Jews in Czech Town Held Captives By Two

The small Czech-Slovakian town of Marie Theresienstadt, with a pre-war population of 17,000, now accommodates 240,000 Jews from all corners of Europe imprisoned there by the Nazis under the doctrine of Aryan superiority.

Some details of this huge concentration camp, located between Prague and Dresden, reached neutral Sweden by accident.

When the Nazis deported Jews to their origin to Marie Theresienstadt, they made the error of sending away several of pure Aryan stock. After four months of unappealing captivity, the mistake was "corrected" and they were returned to Denmark.

Danish patriots have since reported their experiences through the underground news network. Jews from Holland, Norway, Belgium, France, Greece, Italy, Rumania, Serbia, Croatia, Hungary and Poland comprise the population of Marie Theresienstadt.

Two-thirds of the Jewish inhabitants are forced to work in German war industries situated in the town. Mostly plants producing poisonous chemicals. Others are employed on work projects in the town, including a sewage system to accommodate the enormous increase in population.

Many Jews, despairing of any lessening of their plight, are committing suicide by attempting to escape. Two or three take this suicidal way of ending their lives. Successful escape is almost impossible in this concentration camp, and failure is sure death. The bag weighing twenty-four pounds, complete of no feather-clothes, and trousers held together by a gold fastener extending around the four edges.

DIO AT THE NAZIS

Reports from Norway indicate that Oslo's train cars are filled to capacity these days. The Norwegian industries are equal to the situation, however, and instead of the customary rationing, they are taking delight in giving the following advice to their passengers: "Be quiet, retire according to plan."

—Christian Science Monitor.

Health
LEAGUE OF CANADA
+
VITAL INTEREST
CONTROL OF INFECTIONS

The greatest hand upon the mouth, when one coughs or sneezes, is quite ineffective in changing the spread of the common respiratory diseases, the Health League of Canada said in urging the observance of simple rules of hygiene. Sneezing, the sneeze-cough with a handkerchief is good, but not a good manner, it was stated.

When a person coughs or sneezes, he ejects droplets of varying size, most of which fall to the ground within a few feet of the individual. These droplets usually contain thousands of bacteria; for example, from the nose about 100,000 and from the throat about 10,000. Bacteria were found on a plate of culture medium held three feet away from a sneezing person. Bacteria from an infection like the common cold, or measles, above throat, will not expect any active droplets, so that anyone in close proximity is liable to be infected. Many diseases other than those that affect some part of the respiratory system are spread by this direct or spray infection.

Some of the droplets are so small they quickly become dry and evaporate, so that they remain suspended in the air like minute particles and may be carried considerable distances by currents. These droplets, therefore, disseminate in the same route, but instead of sneezing, they are coughed, and people are not in such contact with the infective.

Most of the droplets fall to the ground and become dried. If exposed to sunlight or sunlight, many infective bacteria in the droplets may be killed. However, they are still protected from the germs, and may remain alive for weeks. Whenever there is much sneezing in the air, as in sneezing or sneezing, or by befuddling the infected droplets are raised into the air and inhaled by persons present.

Generally, the Health League of Canada, the infective person is most dangerous in the early stage of the disease, but many continue to be infective after they have recovered. Such persons have been called non-valent carriers.

Individual use of handkerchiefs and tissues, and the use of a handkerchief to cover the mouth and nose, are the best means of preventing the spread of these diseases.

CASUALTY REPORT

A Canadian army priority casualty list for the week ending Jan. 10, 1944, enabled next-of-kin in Canada to receive prompt notification from the Canadian Army of the status of their loved ones. The list was compiled by the Canadian Army of the status of their loved ones. The list was compiled by the Canadian Army of the status of their loved ones.

In the Franco-Prussian war, Prussians more than 88 per cent more than four million letters out of Paris by the end of the war.

Today's INFANTRY
versatile...fast moving!

TRUCK TRANSPORT

These heavy loads the Infantry used in the last war are still one of the prime necessities of the Infantry today. But now they are complemented, with equally excellent rubber tires on big transport trucks for long hauls has turned the Infantry into a motorized force, striking hard at one point, shifting quickly and dealing a blow in another section of the enemy's defenses.

The trucks are used as a means of rapidly deploying a company of Infantry across a wide front. The men drop at the vehicle at speed, leaving the trucks to move on. They are then ready to prepare their advance under protective camouflage of swirling smoke. Their attack will be deadly, equipped as they are with all types of rapid-fire weapons, mortars, and light artillery. They are still the Infantry in every sense of the word.

SUNDAY SCHOOL LESSON

APRIL 2

SAUL BECOMES A NEW MAN

Golden text: "If any man is in Christ, he is a new creature." I Corinthians: 5:17-18, 22-24, 26-27.

Lesson: Saul became a new man. I Timothy 1:13-14.

ACTS 9: Saul said, "I will breathe down wrath and slaughter against the church of God." He was a persecutor of the church. He was a persecutor of the church.

He was a persecutor of the church. He was a persecutor of the church. He was a persecutor of the church.

He was a persecutor of the church. He was a persecutor of the church. He was a persecutor of the church.

He was a persecutor of the church. He was a persecutor of the church. He was a persecutor of the church.

He was a persecutor of the church. He was a persecutor of the church. He was a persecutor of the church.

He was a persecutor of the church. He was a persecutor of the church. He was a persecutor of the church.

He was a persecutor of the church. He was a persecutor of the church. He was a persecutor of the church.

He was a persecutor of the church. He was a persecutor of the church. He was a persecutor of the church.

He was a persecutor of the church. He was a persecutor of the church. He was a persecutor of the church.

He was a persecutor of the church. He was a persecutor of the church. He was a persecutor of the church.

He was a persecutor of the church. He was a persecutor of the church. He was a persecutor of the church.

He was a persecutor of the church. He was a persecutor of the church. He was a persecutor of the church.

He was a persecutor of the church. He was a persecutor of the church. He was a persecutor of the church.

He was a persecutor of the church. He was a persecutor of the church. He was a persecutor of the church.

He was a persecutor of the church. He was a persecutor of the church. He was a persecutor of the church.

He was a persecutor of the church. He was a persecutor of the church. He was a persecutor of the church.

He was a persecutor of the church. He was a persecutor of the church. He was a persecutor of the church.

SAME OBJECTIVE FOR SIXTH FACTORY THAN HIGH TAKES FORM OF TWO MATURITIES

OTTAWA.—The basis of Canada's sixth Victory loan will take the form of two maturities—a 16-year and one 20-year, and a 20-year and one 20-month loan, it was announced by Prime Minister Mackenzie King, sitting from Ottawa, in the House of Commons, April 1.

The loan campaign, which opens April 1 and will last about three weeks, has a minimum objective of \$100 million, the same as the Fifth Victory loan drive, held last autumn. The new victory bonds will mature in 16 and 20 years.

An issue bearing interest at three per cent, offered at a price of 100 per cent, maturing at 120 on June 1, 1960, and a shorter issue bearing interest at 1 1/2 per cent, at a price of 100 per cent, maturing at 100 on May 1, 1947. Both types of bonds will be dated May 1, 1941.

The first interest, coupon on the three per cent, bonds is for a period of seven months, and in the case of the shorter issue, the first interest due is for a period of four months. Subsequent interest coupons become due every six months thereafter. This arrangement continues the practice established in the Fifth Victory Loan and avoids adding the very heavy volume of coupons which came due in November and December.

"There is every indication," said Mackenzie King, "that Canadians everywhere will participate in the venture before fighting during the months ahead in the Italian theatre, and the responsibility, and the privilege of Canadians in every walk of life, will be able to do their part in the Sixth Victory Loan, and in so doing support the men who are fighting in the front lines."

SYNTHETIC RUBBER

Will Probably Be Competitive In Price With Natural Rubber

OTTAWA.—Manufacturers of synthetic rubber in the Dominion are expected to produce synthetic rubber produced in Canada to be competitive in price with natural rubber.

Cost of rubber produced at the Dominion plant is expected to be new was about 40 cents a pound compared with a price of about 45 cents for imported synthetic rubber.

In a matter of weeks it was expected to get the Canadian price down to about 30 cents a pound and eventually to perhaps 16 cents, as it would compete with natural rubber.

Mr. Howe said no war project had been built as much as the synthetic rubber plant. It was a rush job which had to be undertaken when the rubber supply was dwindling and there seemed little opportunity of replenishing it.

The plant now was completed and getting close to full operation. There was no "serious disappointment" in spite of limited engineering knowledge available on construction of such a plant. The project had been rushed to completion, but the cost would be within 10 per cent of the estimated figure.

IN BASIC ENGLISH

Penny Cops Of Atlantic Charter On Sale In Britain

LONDON.—Penny Cops, a recent promise by Prime Minister Churchill, the government issued through His Majesty's stationery office a basic English version of the Atlantic Charter for sale at a penny a copy.

Here's an example how it compares with the original:

The charter read "First, they considered such a government territorial or racial."

In basic English this becomes: "First, they considered such a government territorial or racial."

PILOT WAS LUCKY

Managed To Get Noseless Flying Fortress Home From Germany

A BOMBED PLANE IN BRITAIN.—Despite a blinding snowstorm, a pilot flew his noseless Flying Fortress back from Frankfurt after a freak accident in which three bombs from another B-17 hit the plane.

The three bombs failed to explode, but they knocked off the nose and left the bombardier. Three hours through the open snow by a 70-knot headwind covered the pilot and the copilot.

JAP SHIPS SUNK

LONDON.—Summarizing submarine actions of the eastern fleet, a British naval officer said that a Japanese cruiser of the Kure class, a 1,000-ton aircraft carrier, eight supply ships and several small naval craft have been sunk since the first of the year.

CURE FOR INFECTIONS

LONDON.—The new drug penicillin, which is used successfully in the treatment of wounds and for other purposes, can cure severe eye infections, says the registered medical officer, Dr. L. W. Widdows, Cardiff.

CURE FOR INFECTIONS

LONDON.—The new drug penicillin, which is used successfully in the treatment of wounds and for other purposes, can cure severe eye infections, says the registered medical officer, Dr. L. W. Widdows, Cardiff.

Two Canadians Meet Queen

The Queen recently paid a surprise visit to the Canadian Club. Located in the heart of London, behind the famous Westminster Abbey, the club is open to members of His Majesty's Forces, officers and other ranks. Two Canadians photographed with the Queen are, left, W. V. MacLachlan, (Toronto and Winnipeg) and G. C. P. Y. Davison (Kingston and Winnipeg).

ATLANTIC CHARTER

Principal Allies Will Hold Further Consultations, Says Churchill

LONDON.—Prime Minister Churchill today announced that the principal allies would hold further consultations on the Atlantic Charter under the changing phases of the war.

Mr. Churchill did not elaborate whether these consultations might include a joint meeting of the Allied "big three"—he has been rumored.

His reference to the Atlantic Charter—on which Mr. Churchill only last week refused to schedule urgent debate in common—arose when Daniel Lague, Independent, asked for a clarifying statement "in view of the doubts which existed as to what territories the principle of the Atlantic Charter would cover."

"It is evident that as the changing phases of the war proceed one cannot know as the Atlantic Charter is regarded in the position under the Charter which has become somewhat known as the Atlantic Charter."

Mr. Churchill replied: "I am sure that the Atlantic Charter will be regarded in the position under the Charter which has become somewhat known as the Atlantic Charter."

Mr. Churchill replied: "I am sure that the Atlantic Charter will be regarded in the position under the Charter which has become somewhat known as the Atlantic Charter."

Mr. Churchill replied: "I am sure that the Atlantic Charter will be regarded in the position under the Charter which has become somewhat known as the Atlantic Charter."

Mr. Churchill replied: "I am sure that the Atlantic Charter will be regarded in the position under the Charter which has become somewhat known as the Atlantic Charter."

WINTERED WELL

Flock Of Mallard Ducks Spent Winter In Maple Creek Area

WEST PLAINS, Sask.—One of the interesting sights of the southwest has been a flock of mallard ducks that spent the winter at the Wapiti marsh about 10 miles south of Maple Creek, on Battle creek near Cypress lake.

The ducks are in prime condition and they come right to the Wapiti feeding yard and pick up the grain left by the cattle. They are not afraid of people and seem to know that the ducks are in the area. They are like all other flocks of the southwest, are nature lovers and are very tame.

The P.R.A. conducted a weir across Battle creek to divert the spring overflow down a ditch into Cypress lake. This weir has raised the water about six feet. The additional depth of the water seems to keep it warmer for the creek stays open for several hundred yards below this dam, and there for the winter, the ducks have found a natural water pool.

SYNTHETIC RUBBER

Rate Of Production Will Avoid A Serious Shortage

OTTAWA.—The rate of output in synthetic rubber production in this country is expected to reach 100 tons a month and bulky rubber at 150 tons a month. Production of Buna-S is expected to reach full capacity of 24,000 tons a year by May and the full rate of output at 4,000 tons a year by July.

The synthetic rubber plant of the Government-owned Polymer Corp., built in 1941, is now producing 100 tons a month and bulky rubber at 150 tons a month. Production of Buna-S is expected to reach full capacity of 24,000 tons a year by May and the full rate of output at 4,000 tons a year by July.

and Italy have posts of importance in the Canadian Army in Britain.

Crear's career closely parallels that of General A. G. L. McNaughton, former Canadian overseas army chief. General Crear succeeded McNaughton as chief control battery officer of the Canadian forces in France in the last war and also followed McNaughton as chief of the General Staff at Ottawa.

Major-General E. L. M. "Tommy" Burns, known as "A" fighting general, takes command of Canadian land forces in Italy. It is expected that British troops will be added to the Canadians in Britain to form one invasion army under General Crear.

"Time Bombs"

Our timebombs both write and speak well. But when they wrote about a "time bomb" on the production of Division Provisions, they meant a bomb of its gift of God—on the gift of life.

If we think it peace simply as getting back to the old days and ways, victory won't get us ahead.

To be free must be the last one we can do—just politically or economically. Free from slavery to things and attitudes.

In a war to get the better of the other fellow before he gets the best of us. In peace our goal will be to get the better of ourselves before the other fellow brings us to the end.

Pledges are only good when men are.

It shouldn't take a burning plan to turn a man to God. Burning shame should be enough.

Care for people—not what they are about you.

Electricity means. When ordinary folk live the lives they expect their representative to live, they will get the statements they need.

Canadian Army Deserters

It has been disclosed in the House of Commons that there are at the present time about 11,000 deserters altogether from the Canadian Army, with the latest figures for January, 1944, showing that 535 had deserted in that period and 307 had been apprehended.

On December 31st last, there were 119 credit unions in Alberta with a membership of 10,000 and assets of \$400,000. Since the inception of the credit union law in 1934, there have been 150 credit unions on the file.

THE WORLD OF WHEAT

By H. C. L. STANLEY

Can Flour Be Produced in the West

The "Crop Testing Plan" has just issued a report of two years' work in which it attempted to discover whether flour from acceptable quality could be grown on our prairie. Large plots were set out at 50 points, and the harvested material was sent to Quiloma where they have several sets of data processing plants for testing. In making, nothing and growing. The flour from wheat grown in the west and the third wheat into cloth on a head basis.

At more than half the price good quality flour was produced.

A large number of additional plots will be won this spring by the "Crop Testing Plan" to determine how far the acreage where good quality flour can be produced.

Flour, however, cannot generally be produced in Eastern Canada. Experiments, therefore, will have to be made to discover a method of good or lack testing before an industry would be practicable. Understand that the Government is looking into this.

Experiments with testing wheat, I believe myself, are an excellent project for the University of Manitoba to undertake, for their laboratories available from two rivers, and besides the University already has a large number of scientific research laboratories available.
